Q: How do I save pre-existing user info when creating a new account in CiviCRM? Our membership page (version 4.6.4, Drupal 7.22) allows the user to register with an existing account or create a new account. What if the user has an existing account with us that he/she would like to use to register with our membership program? How do I save the info in that case? I could (of course) create a new user and give them the same account information as the old user. Is there a way to merge the two accounts? A: You can use merge_user API for this. You will have to create new user and add them to role that allows them to do merge_user. If you have a custom merge_user profile form, you will also need to add "merge" link to that. A: There is a separate module, CiviMerge that may assist with this. Note, it does not technically merge the users into one account, just re-use the credentials on an existing account. Here is a screenshot from the back end for the Merge URL field: Q: Categorically: Does 'un' and 'in' in "abstracts un, in" mean 'without' or 'in'?
